## RESEARCH INTEREST

My interest lies at the intersection of **ML and Systems**, where I am presently focusing on co-designing algorithms and systems for large-scale training and deployment of generative models. I have hands-on experience with techniques such as approximate computing, constraint-based scheduling, and runtime adaptation within distributed environments.

## EDUCATION

**Bachelor of Engineering – Computer Science and Engineering** GPA: 9.95/10.00  
Birla Institute of Technology and Science (BITS) Pilani, Pilani Campus, India 2018 – 2022  
*Scored the highest GPA in the institute among 1035 students.*  
*Undergraduate Thesis: Collaborative project with American Express Lab.*

## RESEARCH EXPERIENCE

**Research Associate** – Adobe Research, India Jul 2022 – present  
Systems and Insights Group. Mentor: [Dr. Subrata Mitra](#), [Dr. Shiv K Saini](#)

- Designed a high throughput inference serving system for text-to-image models using a novel caching technique.
- Developed an outage forecasting and root cause diagnosis pipeline for microservice-based architectures on the cloud.
- Published **6 papers**, filed **4 patents**, and successfully integrated research technologies into **2 products**.

**Research Intern** – American Express, India Jan 2022 – Jul 2022  
Document Analytics & Intelligence Lab. Mentor: [Dr. Himanshu S Bhatt](#)

- Designed an end-to-end document processing pipeline (using YOLO, LayoutLM) for visually rich documents.
- Developed a scalable framework for swift adaptation to new document types through automated few-shot learning.
- Implemented cloud-based inferencing using PyTorch models, and on-device inference using lightweight TFLite models.

**Research Intern** – Adobe Research, India May 2021 – Aug 2021  
Big Data Intelligence Lab. Mentor: [Dr. Shiv K Saini](#)

- Used cloud observability data to predict outages, considering the rarity of these events in real-world data.
- Developed a framework to model outages as extreme events by forecasting the distribution of QoS metrics and using a tail-risk regularizer for precise modeling of the distribution tails.

## SELECTED PROJECTS

---

### System for ML – Adobe Research

[NSDI '24, PAKDD '24]

- **Approximate Caching for Diffusion Models (In Product)**: Developed a caching-based text-to-image pipeline to reduce inference latency by up to 2×. Deployed the system on a GPU cluster that uses a Vector Database server for cache indexing and EFS for cache storage. Used a CPU instance to pipeline the database and storage calls alongside GPU execution.
- **High-Throughput Text-to-Image Inference Serving**: Co-designed the resource allocator and query scheduler of an inference serving system for diffusion model on a fixed size multi-node GPU cluster. Achieves 10× lower latency SLO violations, 10% higher average quality, and 40% higher throughput by employing query-aware *accuracy-scaling*.
- **Scaling VizRec Models on Large Data**: Designed a plug-in framework for Visualization Recommender systems that achieves up to 10× speedup in latency. Implemented scalable Deep Q-Learning to optimize input statistics selection.

### ML for System Reliability – Adobe Research

[FSE '24, ASE '24]

- **Outage Prediction in Cloud**: Designed an outage forecasting model using distribution learning to reduce the mean time to detect outages by up to 88% for a large-scale microservice-based service deployed on the cloud. Implemented async functions to fetch real-time metrics from Prometheus for inference, while also supporting incremental training of model.
- **Root Cause and Remediation Consolidation System**: Developed a diagnostic service for cloud failures that merges both alert data and incident reports and achieves 27% improvement in root cause recommendations.
- **Runtime Prediction of Incoming Jobs (In Product)**: Built a pipeline to predict Spark job latency within a multi-tenant data processing platform. Ingested job metadata from Kafka and used Azure Functions to scale the deployment.

## RESEARCH COLLABORATIONS

---

- **On-Device Speculative Decoding and Routing for LLMs** Mar 2024 – Present  
with Prof. Hui Guan, University of Massachusetts, Amherst  
- Exploring *accuracy-scaling* to optimize the on-device inference efficiency of LLMs.
- **Training-free acceleration for text-to-image synthesis** Oct 2023 – Present  
with Prof. Somali Chaterji, Purdue University  
- Designed a novel concept retrieval-based method for accelerating text-to-image models. (*paper under review*)
- **Causality-based Root Cause Diagnosis for microservice architectures** Jul 2023 – Present  
with Prof. Saurabh Bagchi, CRISP Lab, Purdue University  
- Developed an essential graph-based causal inference algorithm for RCA in complex systems. (*paper under review*)

## TECHNICAL SKILLS

---

- Programming languages: Python, C, C++, Java, SQL, Verilog, MIPS
- Packages & Frameworks: PyTorch, Keras, TensorFlow, scikit-learn, Git, Docker, Kubernetes, Kafka

## UNDERGRADUATE COURSES:

---

Operating Systems, Database Systems, Computer Networks, Compilers, Computer Architecture, Artificial Intelligence, Information Retrieval, Data Structures and Algorithms, Probability and Statistics, Linear Algebra

## COURSE PROJECTS

---

- [GitHub] An enhanced collaborative filtering recommender system with fine-tuned item weights and similarity scores.
- [GitHub] An AI tutoring system for teaching algebra, generating questions based on a dynamic reward function.
- [GitHub] A custom grammar parser and compiler in C for language design and type expression computation.
- [GitHub] A REACT app for seamless online education, integrating content sharing and video calling features.
- [GitHub] A lightweight progressive web app client using JavaScript to work with the metastudio.org server.

## ACTIVITIES & ACHIEVEMENTS

---

- Industry mentor for UMass Master's students' group, guiding research on On-device model security.
- Mentored 10 undergraduate interns and collaborated with 2 PhD interns during summer internships at Adobe.
- Contributed to multiple paper reviews for technical conferences including ATC, AISTATS, AAAI, EACL, etc.
- Awarded 100% merit scholarship for academic excellence across all semesters; ranking top among all students.
- Served as Student Senate Representative for over 1000 undergraduate students in the Student Faculty Council.
- Successfully organized BITS Pilani's Annual Technical Fest, boosting external participation and outreach by 200%.
